

## WHY CHOOSE SCREENEZE®?

Ray Bass, the inventor of SCREENEZE®, was installing screens on his home with a product called Screen Tight®. After wrestling with the Screen Tight® system, he noticed a pucker in one of the panels. When he attempted to remove the screen, it broke and the screen fabric ripped. He was left without an extra piece and forced to go back to the “big box” store to retrieve a new one.

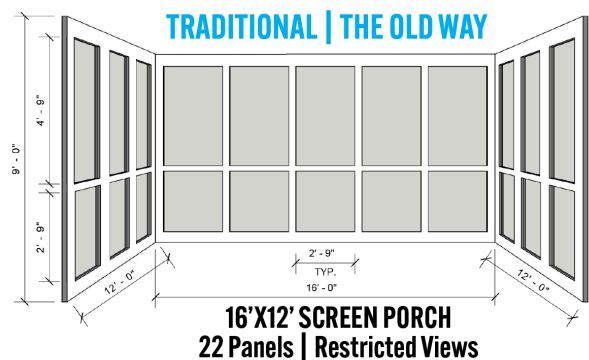

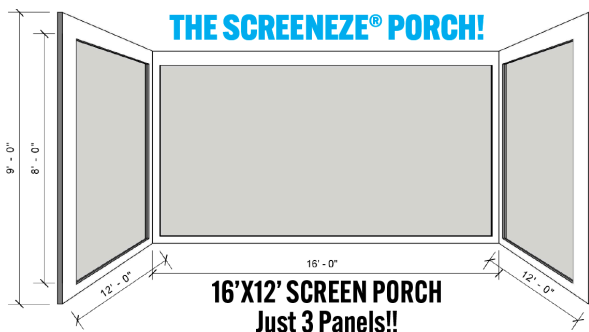

Ray knew there had to be a better way. He was inspired to come up with something better than 1x1 aluminum or flat plastic spline like Screen Tight®. He set out to create a system that would self-tighten and self-correct. He wanted to make it easy to correct an error at any stage allowing you to replace it over and over. He was successful and introduced SCREENEZE®.
